Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.

Claim 21; Page 179-180; 608pp; English.

The present invention describes composition of matter (I) comprising (FC domain, pharmacologically active peptides, and linkers. Where (I) (X1)a-F1-(X2)b, where: F1 = an FC domain, X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P 2 , or -(L1)c-P1-(L2)d-P2-(L3)e-P 3 , or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, Ρ2

The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAA6956 and AAB18955 to AAA18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modified peptide; mimetic; Fc domain; fusion; immunoglobulin G; IgG; EPO; erythropoietin; TPO; tumour necrosis factor alpha inhibitor; TNF-alpha inhibitor; interleukin I antagonist; II-1 antagonist; TMP; TPO mimetic peptide; EPO mimetic peptide; EMP; VEGF antagonist; MMP inhibitor; antiinflammatory; antitumour; immunosuppressive; cytostatic; antirheumatic; antiarthritic; antidabetic; ophthalmological; cytostatic; antorectic; antiinfertility; antidabetic; dermatological; neuroprotective; inflammatory disease; autoimmune disease; tumour growth; cancer; rheumatoid arthritis; diabetic retinopathy; infertility; obesity; sleep disorder; neurological degenerative disease; anaemia; sleep disorder; neurological degenerative disease; anaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뮍
neuroprotective activities. (I) can be used as a therapeutic or compounds are useful for red blood cell levels such as anaemia. The TPO-mimetic compounds are useful for red blood cell levels such as anaemia, seystemic, saystemic, such as anaemia, such as anaemia, such as a part of diagnostic kit to detect the presence of their proteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, infertility, and neurological degenerative diseases. (I), comprising EPO-mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic compounds are useful for treating disorders characterised by low megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency as thrombocytopaenia, aplastic anaemia, metastatic cumour which result in thrombocytopaenia, systemic lupus erythematosus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modified peptide; mimetic; Fc domain; fusion; immunoglobulin G; IgG; lerythropoietin; TPO; tumour necrosis factor alpha inhibitor; TWF-alpha inhibitor; interleukin 1 antagonist; IL-1 antagonist; TMP; TPO mimetic peptide; EPO mimetic peptide; EMP; VEGF antagonist; MMP inhibitor; antiinflammatory; antitumour; immunosuppressive; cytostatic; antirceumatic; antiinfertiiit; antidabetic; ophthalmologic antianaemic; anorectic; antiinfertiiity; haemostatic; dermatological; neuroprotective; inflammatory disease; autoimmune disease; tumour grow cancer; rheumatoid arthritis; diabetic retinopathy; infertiity; obes; sleep disorder; neurological degenerative disease; anaemia; thrombocytopaenia; metastatic tumour; systemic lupus erythematosus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 2; Fig 8; 176pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Feige U,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-MAY-2000; 2000US-00563286

represent amino
exemplification
A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP] 1-(L 1) nTMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least 10 14 residues in length comprising x_2-X_1_0, x_2-X_1_1, x_2-X_1_2, x_2-X_1_3, x_2-X_1_4, x_1-X_1_0, x_1-X_1_1, x_1-X_1_2, x_1-X_1_2, x_1-X_1_3, and x_1-X_1_3, x_2-X_1_4, x_1-X_1_0, x_1-X_1_1, x_1-X_1_2, x_1-X_1_2, x_1-X_1_3, and x_1-X_1_3, x_1-X_1_3, a
                                                                                                                                                                                                                                                                              Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment diseases which involve thombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 20
N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunoglobulin; IgG1; Fc; thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anaemic; dermatological; immunosuppressive; anti-inflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          04-SEP-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The present invention describes composition of matter (I) comprising an CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(CC (L2)d-P2-(L3)e-P3), or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, CC (L2)d-P2-(L3)e-P3), and P4 = are each independently sequences of pharmacologically active CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, CC c, d, e, and f = are each independently 0 or 1, provided that at least 1 CC of a and b is 1. The composition can have cytostatic, antiasthmatic, CC thrombolytic and immunosuppressive activities. DNAs, vectors and host CC compositions. The compositions are useful for treating cancer, asthma, CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than CC a Fab domain) can provide a longer half-life or incorporate functions CC such as Fc receptor binding, protein A binding, complement fixation, and CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to CAAB18003 represent nucleotide and amino acid sequences used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressi cytostatic, antitheumatic, antitheumatic, antidiabetic, ophthalmologi antianaemic, anorectic, antiinfertility, haemostatic, dermatological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 6; Fig 23A-B; 176pp; English

cc neuroprotective activities. (I) can be used as a therapeutic or cc prophylactic agent as well as for screening purposes. (I) is useful for cc diagnosing diseases characterised by dysfunction of their associated cc protein of interest, for identifying normal or abnormal proteins of cc interest, as a part of diagnostic kit to detect the presence of their cc proteins of interest in a biological sample. Additionally, (I) is useful cf for treating inflammatory and autoimmune diseases, tumour growth, cancer, cc infertility, and neurological degenerative diseases. (I), comprising EPO-cc mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising cc empathence are useful for treating disorders characterised by low red blood ser useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating disorders anaemia, metastatic deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic tumour which result in thrombocytopaenia, systemic lupus erythematosus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cytostatic; antirheumatic; antiarthritic; antidiabetic; ophthalmological; antianaemic; ancrectic; antiinfertility; haemostatic; dermatological; neuroprotective; inflammatory disease; autoimmune disease; tumour growth; cancer; rheumatoid arthritis; diabetic retinopathy; infertility; obesity; sleep disorder; neurological degenerative disease; anaemia; sleep disorder; neurological degenerative disease; anaemia;

The specification describes a method of decreasing the incidence of an immune reaction in a subject who is given a therapeutic composition comprising a (potentially) immunogenic therapeutic molecule, tolerizing a subject to such a molecule, or decreasing the antibody titer in a subject administered such a molecule. The method comprises administering CTLA-4 to the subject within an effective time interval relative to the administration of the therapeutic composition. The CTLA-4 may further comprise an immunoglobulin heavy chain constant region. The method of the invention is useful for modulating an immune response to an immunogenic therapeutic agent. The present sequence represents a mL63-9 peptide fused
                                                                                                                                                                                                                                                                                                                                                                                        Decreasing immune reactions in a subject treated with a (potentially) immunogenic therapeutic molecule comprises administering CTLA-4 within effective time interval relative to the administration of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Khare

The invention relates to a thrombopoletin mimetic peptide (TMP) (I) that combined to the c-mpl (mpl) receptor, and which stimulates the production of platelet precursors, is new Further cdisclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition of the invention is useful for treating thrombocytopaenia in an animal, and for increasing megakaryocytes or conditions involving a megakaryocyte and/or platelet deficiency, e.g. conditions involving a megakaryocyte and/or platelet deficiency, e.g. conditions involving thrombocytopaenia such as aplatelic anaemia, autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, canaemia, hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity and in vivo circulation time. The current sequence represents the amino acid sequence encoded by a vector for use in constructing C-terminal Fc fusion compounds (i.e. peptide attached at its constructing C-terminus of the Fc).
                                                                            밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       문
neuroprotective activities. (I) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (I) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, infertility, and neurological degenerative diseases. (I), comprising EPO-mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet cumour which result in thrombocytopaenia, systemic lupus crythematosus, and Fanconi's syndrome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAB17951
The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (XI)a-F1-(XZ)b, where: F1 = an Fc domain; X1 and X2 are independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active
                                                                                                                                                                                                                                   Novel composition of active peptides, usef
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;
                                                                                                                                                                                     Example 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        23-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                           peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAA6926 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Map position: 14q32.33-14q32.33

C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C;Superfamily: immunoglobulin C region; immunoglobulin homology

C;Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin

F;20-85/Domain: immunoglobulin homology <IMI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Molecule type: protein
